

TravelGuardian

AI-Powered Travel Intelligence & Safety

Video Intelligence & World Models

Beta Hacks x Antler Hackathon 2026

THE PROBLEM

Travelers explore blind.

No context — you're standing in front of a landmark but don't know its significance, history, or what's nearby

No memory — every trip starts from zero. Apps don't remember your preferences, past visits, or what you liked

No safety link — family and friends have no idea where you are or if you're safe while traveling

THE SOLUTION

Your AI travel companion that sees, remembers, and protects.

Snap & Understand

Point at any landmark. AI identifies the place, explains its significance, and surfaces safety tips and nearby attractions.

Smart Context

Chat with an AI that remembers your preferences, past visits, and conversations. Gets smarter with every trip.

Guardian Ping

Real-time safety check-ins sent to a guardian's dashboard. AI-generated location summaries via WebSockets.

HOW IT WORKS

Four-step flow

TECH STACK

Built on Butterbase

AI Gateway

Gemini 2.5 Flash via Butterbase AI — zero infra vision model

Database

7 tables — landmarks, plans, visits, check-ins, conversations

KV Store

Analysis cache, visit counters, conversation memory

Realtime WebSockets

Live guardian dashboard with instant safety alerts

Butterbase Features Used

- Database
- AI Gateway
- KV Store
- Realtime
- Auth
- Storage
- Frontend Deploy
- MCP

ARCHITECTURE

How it's built

WHAT MAKES IT SMART

3 layers of persistent memory

Analysis Cache (KV Store)

AI scene analysis is cached per landmark — instant on revisit, saves API calls and cost

Preference Learning (KV + DB)

AI extracts preferences from chat (cuisine, safety, interests) and tailors future recommendations

Conversation Memory (KV Store)

Chat context persists per landmark — resume conversations across sessions with full history

Travel Plans & Visit Tracking (DB)

Daily itineraries, visit counts, photo storage — your full travel journal persisted
